The TD1150 WORKGard™ pedestrian barricade forms a complete barrier to protect against unnecessary pedestrian accidents. It consists of 4 or 6 articulating panels measuring 30"W X 42"H that come fully assembled with snap on hinges, roller wheels, rubber floor mounts and Velcro Storage Strap. Additional panels can be added to the units.

The TD1150 WORKGard™ escalator barricade 4-panel set prevents pedestrian access at top of escalator, while the 6-panel set blocks access while allowing ample work space at the bottom "pit" of escalator. The TD1150 Escalator Barricade has the same features as the Pedestrian Barricade, but includes panel stabilizer plates and a hand-rail C-Clamp assembly to secure unit to the escalator. Individual panels can be ordered to increase the size of the 4-panel & 6-panel units. For information on private labeling, please contact customer service.
